

Application of information technology in managing members of the Farmers' Association at the People's Committee of Thinh Duc Commune, Thai Nguyen City, Thai Nguyen Province

Duong Thi Trang

Abstract: This topic focuses on applying information technology (IT) to improve the efficiency of managing members of the Farmers' Union at the People's Committee of Thinh Duc Commune. The reason for choosing this topic stems from the need to realize digital management, aiming to enhance the quality of service and support for the union's activities. The objective is to build an online member information management system, providing technical solutions to integrate and exploit member data more effectively. The research method is based on a combination of theoretical research and experimental application deployment at the local level. The significance of the topic lies in providing a modern management tool, helping to improve information accessibility and enhance service quality for members, while contributing to the digitalization of state management.
