

Computerization of personnel management at Jukwang Precision Vietnam Co., Ltd.

Duong Thi Loan

Abstract: This topic aims to exploit the role of informatics in the human resource management process, through analyzing the current situation and identifying appropriate technical solutions. The main objective is to build a human resource management support system based on information technology to improve operational efficiency. The method combines theoretical research with application deployment at Jukwang Precision Vietnam Co., Ltd., to ensure the practicality and feasibility of the proposal. Thereby, the topic not only brings direct benefits to the company but also contributes to the general development of the human resource management field.

Keywords: Human resource management, Information technology, Management system, Computerization, Jukwang Precision
