

Application of information technology in household registration and civil status management at Song Ho Commune People's Committee - Thuan Thanh District - Bac Ninh Province

Nguyen Thi Thanh

Abstract: This topic aims to solve the problem of improving the efficiency of household registration and civil status management through the application of information technology at the Song Ho Commune People's Committee. The objective of the research is to design and implement an electronic management system to support population management. By combining theoretical research with experimentation, the topic affirms the feasibility and benefits of applying information technology in household registration and civil status management. The expected result is to create an effective technical solution, contributing to the modernization of social management at the local level.
