

Enhancing the warehouse management system at BanNiCo Engineering Company Limited in Bac Ninh Province

Nguyen Thi Xuan Binh

Abstract: In the context of increasing warehouse management demands, this topic aims to solve the problem of improving the operational efficiency of the warehouse management system at BanNiCo Engineering Co., Ltd. Through practical research and the application of a combined theoretical and experimental approach, the project will develop an advanced management system to optimize operational processes. The expected outcome is a significant improvement in inventory control capabilities and a reduction in logistics costs, making an important contribution to the company's sustainable development.
