

# **Building an English learning support program for children through the Matching Word English game.**

**Pham Huu An**

**Abstract:** In the context of the increasing demand to enhance children's English communication skills, this topic focuses on developing an effective learning support system. The main objective is to design and implement the Matching Word English game application to help children learn English vocabulary in a more fun and easier way. The research method includes both theoretical analysis of vocabulary learning through games and experimentation with a sample group. The expected result is to create a useful educational tool that enhances children's absorption ability in the process of learning English.
