

Build a CMS for the website using the Laravel Framework.

Le Duc Anh

Abstract: This topic focuses on developing a Content Management System (CMS) based on the Laravel Framework to meet the requirements of websites that need efficient management. Through theoretical and experimental research, the goal is to build a flexible, highly secure CMS solution while optimizing user experience. The expected result will provide web development teams with a powerful tool to create, edit, and manage website content effectively, while also contributing to the advancement of Web technology and the Laravel Framework.

Keywords: CMS, Laravel Framework, Web Development, Content Management, Security
