

Research Android API and develop an online fast food ordering app on the Android platform for the Hey Station store in Sóc Sơn, Hà Nội.

Duong Quoc Bao

Abstract: This topic aims to conduct an in-depth study of the Android API to develop an online fast food ordering application for the Hey Station store in Soc Son, Hanoi. In the current context, the demand for technology use in the food service industry is increasing. The topic focuses on designing and implementing an App system based on the principle of a user-friendly interface (UI) combined with modern mobile application development techniques. The research method includes both theoretical study of the Android API and direct experimentation during the application development process. It is expected that building and deploying this App will bring significant benefits to food service stores, while providing a convenient shopping experience for users.

Keywords: Android API, mobile application development, fast food ordering
