Building the TeemoFoods fast food ordering application.

Ngo Thu Ha

Abstract: In the context of the strong development of information technology and the increasing demand for convenience in shopping, this topic focuses on building a mobile application system for selling TeemoFoods fast food. The main goal is to create a convenient shopping experience for customers while optimizing order management and logistics processes for service providers. The research method includes analyzing user requirements, designing an intuitive user interface, and deploying the application using modern development tools. The expected results will expand TeemoFoods' market and enhance customer satisfaction.
