

Research on Workpres language to build a sales management website.

Bui Thi Thu Hang

Abstract: This topic researches and deploys a sales management website system based on WorkPres technology, aiming to solve the problem of improving business management efficiency. By integrating the advanced features of WorkPres, the topic aims to build an intuitive and user-friendly interface for end-users, as well as provide the ability to automate business operation processes effectively. The research method includes theoretical analysis of WorkPres technology combined with experimental application deployment to ensure the system's feasibility and reliability. The expected result is a useful application solution that contributes to optimizing the sales management process in a digital business environment.
