

Building a management and sales system for a Japanese-style restaurant.

Pham Quang Huy

Abstract: This topic focuses on the necessity of building a specialized management and sales system for Japanese-style restaurants. The goal is to address issues of work efficiency, customer friendliness, and revenue optimization through the application of modern technology. The research method combines business management theory with software implementation experimentation. The expected results will contribute to improving operational processes and enhancing service quality, thereby increasing the restaurant's competitiveness in the market.

Keywords: Management system, automated sales, Japanese restaurant, information technology, process improvement
