

Building a library management program for Phu Thuong Secondary School.

Trieu Thi Thanh Huyen

Abstract: This topic aims to meet the need for modernizing the library management process at Phu Thuong Secondary School. Through analyzing the current situation, it proposes solutions to build a book and reader information management system based on software technology. The research method combines library management theory with application development experimentation. It is expected that the implementation of the system will improve resource utilization efficiency and enhance the quality of library services.
