

Building a real estate website in Thai Nguyen province based on Dot Net MVC technology

Bui Quang Hung

Abstract: This topic focuses on building a real estate web system to meet the demand for fast and accurate updated information about the real estate market in Thai Nguyen province. Through a process of theoretical research combined with experimentation, the topic applies Dot Net MVC technology to develop a user-friendly interface, specialized search functions, and an effective content management system. The expected results of the topic are not only highly applicable in supporting real estate brokers but also contribute to the development of local information technology.

Keywords: Real estate website, Dot Net MVC, Thai Nguyen province, content management, specialized search.
