

Build a website introducing tourist attractions in Hoai Duc district.

Le Thi Huong

Abstract: In the context of rapid tourism development in Vietnam, building a website specializing in tourist attractions of Hoai Duc district aims to meet the local information and promotion needs. The objective is to design and implement a website system with a user-friendly interface, providing comprehensive information about destinations, services, and tourism events. Through a process of theoretical research combined with experimentation, the project hopes to contribute to enhancing the tourist experience while providing local tourism management with an effective tool. The expected results will demonstrate the system's applicability in promoting sustainable tourism development.
