

Build the OWSNews news reading application on both Android and iOS platforms using React Native.

Nguyen Nhat Linh

Abstract: In the context of the increasingly developing digital information landscape, this topic focuses on building a cross-platform OWSNews news reading application that allows users to easily follow important events on both Android and iOS operating systems. Through theoretical research on data management and user interface, the topic applies the cross-platform application development method using React Native to create a modern and flexible technological solution. The expected outcome of the topic not only provides users with a convenient news reading experience on multiple devices but also contributes to promoting the popularity of cross-platform application development techniques in the field of digital media.
