

Building a movie management application website using Web API and Angular

Dao Thi Mai

Abstract: In the current digital age, building an online movie management system not only provides an effective solution for content managers but also meets the needs of users seeking and enjoying diverse films. This topic focuses on developing a website using Web API combined with Angular to build a professional movie management system. Through theoretical research and experimental implementation, the topic aims to contribute to the information technology industry and provide an effective movie management solution.

Keywords: Web API, Angular, Movie Management, Web Application, Online System
