

Building an e-commerce application on the Android platform

Pham Ba Muoi

Abstract: In the context of rapidly developing information technology, the necessity of building an e-commerce application on the Android platform is undeniable. This project aims to research and develop an e-commerce system to support businesses in selling online more effectively. The approach includes analyzing requirements, designing the user interface (UI/UX), and implementing the application on Android. The expected results of the project will contribute to the digital development of businesses and enhance the shopping experience for consumers.

Keywords: E-commerce application, Android, user interface (UI/UX), requirements analysis, e-commerce system
