

Build a website introduction for Lavin Home using Laravel Framework.

Trinh Thi My

Abstract: In the context of increasingly digital development, building a professional website is an urgent requirement for businesses like Lavin Home. This project aims to design and implement a website system to introduce Lavin Home's products and services using the Laravel Framework. Through a combination of theoretical research and experimentation, this project will provide a solution that simultaneously optimizes user experience and enhances marketing effectiveness for the business. The expected outcome is a highly interactive, user-friendly website that fully meets customers' information needs.

Keywords: Laravel Framework, introduction website, real estate business
