

Building a website providing wallpapers for Samsung Gear smartwatches.

Luu Phuong Nam

Abstract: In the context of the development of IoT technology and the trend of personalizing user experiences, this topic focuses on building a website to provide wallpapers suitable for Samsung Gear smartwatch lines. The main goal is to create a convenient system that allows users to customize and quickly update wallpapers on their watches through a web interface. The research method combines website design theory with application deployment experiments to ensure efficiency and meet users' high personalization needs. This topic will contribute to enhancing user experiences on modern technology products.

Keywords: Samsung Gear smartwatch, custom wallpaper website, IoT, personalized experience, web design
