

Build a computer sales website for Phong Vũ laptop store.

Pham Thu Ngan

Abstract: In the context of the booming online business landscape, this topic focuses on building a website system specializing in the distribution and sale of computers to serve the needs of Phong Vũ laptop store. The project aims to design and implement a user-friendly web interface while integrating functions such as product management, order processing, and online payment to optimize business processes. The research methodology includes analyzing market needs, designing and deploying the website based on good UX/UI principles, combined with modern technologies such as HTML5, CSS3, and JavaScript. The project hopes to significantly contribute to enhancing the competitiveness of Phong Vũ laptop store in the digital business environment.
