

Building a real estate website in Thai Nguyen province

Nguyen Mai Phuong

Abstract: In the context of economic development and the rapid growth of the real estate sector in Thai Nguyen province, building a professional website system is necessary to meet the information needs of consumers. This project aims to research and design a real estate website, providing services such as searching for property information, comparing prices, and connecting with local brokerage firms. The method combines theoretical research and experimental implementation to build a user-friendly interface and robust functionality. The expected results will bring significant benefits to the local community by enhancing access to real estate information.
