

Building an open source nodeblog system

Nguyen Van Quan

Abstract: This topic focuses on building and deploying an open-source blog system based on the Node.js platform. The context for choosing this topic is based on the strong development of web technology and the need for highly personalized content solutions in practice. The goal is to create a blog system that is easy to use, flexible, and secure for users. The research method includes analyzing functional and non-functional requirements, designing the user interface, and deploying software based on Node.js with Git version management. The expected result is to provide an effective solution for creating, managing, and sharing online blog content.

Keywords: Node.js, open source, blog system
