

Building library management software for Phu Luong Thai Nguyen high school in C#.

Nguyen Duc Thuan

Abstract: In the context of increasingly limited traditional library management, this topic aims to solve the problem of improving the efficiency and service quality of the library system through the development of management software. The topic combines theoretical research on library management with practical implementation using the C# application. The goal is to create a specialized library management system for Phu Luong Thai Nguyen High School, aiming to optimize the process of storing, searching, and issuing books. Through this, the topic is expected to contribute to improving library management technology in schools, thereby enhancing the quality of education and research.

Keywords: Library Management, C# Software, High School
