

Design and build a news aggregation website

Phuong Thi Thuan

Abstract: This topic aims to design and build a news aggregation website to meet the diverse information needs of users in today's reality. Through theoretical research on user interfaces, news data structures, and modern web technologies, the topic will implement key functions such as efficiently collecting, categorizing, and displaying news. This project not only contributes to improving user experience but also plays an important role in digital development and the informatization of society.

Keywords: News aggregation website, Web technology, Online news, User interface, News classification system
