

Build an e-commerce website integrated with a quick search feature.

Tran Thi Huyen Trang

Abstract: In the context of the rapidly growing e-commerce industry, building a fast search system for e-commerce websites has become an urgent need. This topic focuses on the process of designing and implementing a solution that integrates fast search functionality into an e-commerce website system, aiming to optimize user experience and improve website performance. Through a combination of theoretical research and experimentation, the topic aims to provide a synchronized solution that meets the requirements for speed and accuracy in the search process. The expected results will contribute to the development of search techniques in the e-commerce environment.

Keywords: e-commerce, quick search, website, optimization, user experience
