

Design and build an online conference support application on the Android platform

Vũ Đức Trọng

Abstract: In the context of rapidly developing information technology, organizing online conferences has become necessary to reduce costs and increase efficiency. This topic focuses on designing and building an application to support online conferences on the Android platform in order to provide a flexible solution for online meetings. The research method is based on a combination of user interface theory and application deployment experimentation. The goal of the topic is to create a convenient, easy-to-use system with integrated features such as video conferencing, screen sharing, and meeting recording. The expected results from this research will contribute to promoting the development of information technology in the fields of education and business.

Keywords: Online conference, Android, User interface, Video conferencing, Screen sharing
