

Build a personal expense management application on Android

Nguyen Cong Tuyen

Abstract: In practice, personal expense management is becoming increasingly important for users. This topic focuses on building a personal expense management system based on the Android platform, aiming to help individuals track and control their spending more effectively. Through conceptual research, user interface (UI/UX) design, and application implementation, the goal of this topic is to create a practical and convenient solution for users in managing personal expenses. Through the process of application development and testing, we expect to provide a useful solution and contribute to improving the user experience of financial management applications on mobile platforms.
