

Building a virtual private network for XSPACE MEDIA joint stock company

Duong Thi Tuoi

Abstract: In the context of the rapid growth of information technology, building a Virtual Private Network (VPN) for XSPACE MEDIA Joint Stock Company to secure data and enhance work efficiency has become urgent. This topic proposes a solution for deploying a safe and optimized virtual network system, combining theoretical research with experimentation to ensure security and information transmission speed. The expected results will significantly contribute to the company's digital development while providing a foundation for business expansion.

Keywords: Virtual Private Network (VPN), data security, virtual network system, experimental research, digital growth
