

Building a mobile phone sales website for Thai Nguyen phone store

Pham Van Viet

Abstract: In the context of increasingly widespread digitalization, building a mobile phone sales website has become an urgent requirement for stores. This topic focuses on developing a specialized e-commerce system for the Thai Nguyen mobile phone store to optimize the shopping experience and increase business efficiency. Through a combination of theoretical research and empirical methods, the topic proposes technical solutions to create a user-friendly interface along with modern technologies such as blockchain for data security. The expected result is an effective and secure mobile phone sales website, contributing to the development of local e-commerce.

Keywords: E-commerce website, Blockchain, cloud computing, Blockchain network, digital services
