

Building a motorcycle insurance service management program for Sao Viet Company

Duong Tuan Vu

Abstract: In the context of increasing demand for motorcycle insurance and the development of information technology, this project aims to build a professional motorcycle insurance service management system for Sao Viet Company. Through a combination of theoretical research and experimentation, we plan to develop a technical solution that best meets the needs of customers and the company. The project hopes to contribute to improving service quality and management efficiency in the motorcycle insurance sector, thereby bringing practical benefits to both the company and users.
