

Building a security system for Hadanbi Vina's network system on ISA Server.

Trinh Hoang Vu

Abstract: In the context of increasingly complex cybersecurity threats, building an effective security system is an urgent need. This topic focuses on developing and deploying a security system based on ISA Server for Hadanbi Vina Company. The objective of the research is to identify security requirements, analyze and select an appropriate architecture, thereby building and testing the system to ensure network safety. The research process includes referencing modern technologies in the field of ISA Server and applying them in practice. The expected result is an effective security solution, contributing to enhancing the competitiveness of Hadanbi Vina Company.
