

Applying Single Page Web technology to build a website for Hung Hang bus company.

Hoang Giang Son

Abstract: In the context of the continuous development of the transportation industry, the choice of Single Page Application (SPA) technology plays an important role in building an advanced website system and optimizing it for Hung Hang Passenger Car Company. The objective of the research is to propose and implement an SPA solution to improve access performance, user experience, and information management on the web platform. The method combines requirement analysis and system design based on SPAs with technical experimentation to evaluate effectiveness. The significance of the topic lies not only in its ability to enhance service quality but also in its contribution to the development of technology in the transportation sector.
