

Building coffee shop management software N01.

Nguyen Duc Thanh

Abstract: This topic focuses on building a software management system for N01 coffee shop to optimize operational processes and improve work efficiency. In the current context, the demand for strict management and automation of activities in the coffee industry is increasing. The objective of the topic is to design and deploy a web-based software system, including functions such as employee management, inventory management, order management, and revenue reporting. The research method combines management principles and modern technology to build a system suitable for the actual requirements of the N01 coffee shop. The expected result is an effective solution to enhance management capacity and increase competitiveness in the coffee market.
