

Building an online topic registration system for students of the Faculty of Information Technology, University of Information and Communication Technology.

Tran Quang Huy

Abstract: In the practical teaching and scientific research at the University of Information and Communication Technology, managing and registering thesis topics for information technology students faces many difficulties. Therefore, the goal of this project is to build an online thesis topic registration system to optimize the workflow. The research method includes analyzing requirements, designing a user-friendly interface, and deploying a web-based application. The system is expected to bring high efficiency in information management and support the creative process of students' thesis topics.

Keywords: Topic registration system, information technology, information management, graduation project, web application
