

Build Minh Tam phone sales website

Tran Thi Khanh

Abstract: In the context of the increasingly developing online business environment, this topic focuses on building a professional e-commerce web system to serve the Minh Tâm store. The objective of the research is to design and deploy a mobile phone retail website with key functions such as product management, order management, customer management, and online payment. The research methodology includes analyzing business requirements, designing user interfaces, and developing the system based on PHP and MySQL. The topic is expected to provide a useful solution for the Minh Tâm store as well as contribute to the field of e-commerce website development.

Keywords: Retail website, E-commerce, PHP, MySQL, User interface
