

Design a WAN network system for VNPT Thai Nguyen

Pham Dinh Hop

Abstract: Research and design of a Wide Area Network (WAN) system for Thai Nguyen Telecommunications One Member Limited Liability Company (VNPT Thai Nguyen), aiming to meet the demand for fast, secure, and efficient data transmission in business operations. The research methodology includes analyzing specific requirements, designing network architecture based on modern standards, and conducting practical deployment trials. The expected outcome is a stable WAN system that ensures service quality and optimizes operational costs.
