

Deploy Failover - cluster system for database servers in the network system of Foxconn Bac Ninh factory.

Nguyen Van Huy

Abstract: Research and deployment of a Failover-cluster system to improve the reliability and recovery capability of the database at the Foxconn Bac Ninh factory. The topic is practice-based, using a combined theoretical and experimental method to build an automatic failover and data sharing solution between servers. The expected result is to enhance stability and minimize data loss time in the event of technical failures.
