

Building a firewall system for the guest network of Military Region I on TMG 2010.

Nguyen Thi Nga

Abstract: This topic aims to research and deploy a firewall system to protect the local area network (LAN) at the Military Region I guesthouse. The construction of this system is intended to meet the increasingly stringent information security requirements in the defense sector. Through the process of design, programming, and deployment, the topic utilizes the TMG 2010 platform to ensure efficiency and suitability for the specific network environment of the unit. The research results not only contribute to improving the quality of information services in the military region but also provide a practical solution for other organizations with similar needs.
