

Building a content management system for websites using the Laravel framework.

Vu Xuan Dai

Abstract: In the increasingly developing digital age, building and maintaining an effective Content Management System (CMS) has become more important than ever. This topic focuses on applying the Laravel framework to design and deploy a CMS for websites. The objective of the topic is to solve the problem of managing diverse and flexible content across multiple website platforms through a simple and user-friendly interface. Through theoretical research combined with experimentation, the topic aims to contribute a highly applicable technical solution in practice. The expected result of the topic is the successful construction of a CMS with key features such as managing articles, categories, and access rights, thereby enhancing the performance of websites.

Keywords: Laravel, Framework, Content Management System (CMS), Website, Application Deployment
