

Building material management software for GSI company

Nghiem Xuan Son

Abstract: This topic aims to meet the requirement of optimizing the material management process at GSI Company Limited through the development of a management system based on modern technology. Through the research process, the topic applies a combined approach of theory and experimentation to build automated management software. The expected result is to improve material management efficiency, minimize losses, and enhance tracking capabilities. This topic contributes significantly to promoting technological development in asset management at small and medium-sized enterprises.

Keywords: Material management software, GSI Company, Automation system, Applied research, Asset management
