

Build a food ordering application for the Đức Huệ - Thái Nguyên store.

Ha Van Thuan

Abstract: In the context of the increasing use of online services, this topic focuses on developing a mobile application to optimize the ordering process at Đức Huệ food store in Thái Nguyên. The project aims to create an intelligent system that helps customers more easily select and pay for food items. The research methodology includes requirement analysis, user interface design, and application deployment on a mobile platform. It is expected that the implementation of this topic will bring new solutions to the local food service industry while enhancing the customer experience.
