

Building a website for the alumni association of the University of Information and Communication Technology.

Phung Viet Tien

Abstract: In the modern context, building a dedicated website to serve alumni has become an inevitable requirement. This project aims to design and implement a website system that helps alumni connect and share information more effectively. Through theoretical research on user interface (UI/UX) design and web development techniques, combined with practical application deployment, this project expects to achieve the goal of creating a useful online platform that enhances interaction among members of the alumni community. The research results will significantly contribute to improving the quality of alumni support services.
