

Building a dormitory management system for Funing Honghai Company.

Do Van Trung

Abstract: In the context of increasing demand for infrastructure and services for students, this topic focuses on building a modern and efficient dormitory management system. The main goal is to improve students' quality of life through upgrading facilities and management services. Using a combination of theoretical research and empirical methods, this project not only proposes technical solutions but also focuses on optimizing dormitory management processes to create a sustainable system. The expected outcome of the topic is to provide an advanced technology platform to enhance operational efficiency and service quality, while contributing to the development of the dormitory management industry.

Keywords: Dormitory management system, Funing Honghai Company, Infrastructure upgrade, Technology application deployment
