

Build a mobile phone and accessory sales website for Apple One store using ASP.Net MVC5

Pham Quoc Tung

Abstract: In the context of increasing digitalization, building a specialized website to serve the business needs of Apple One stores has become an unavoidable trend. This topic focuses on the process of designing and implementing an online sales system through the ASP.Net MVC5 platform. The main objective is to create a user-friendly interface that is easy to manage and update product information. The research methodology includes synthesizing relevant documents, analyzing the technical requirements of the project, and implementing the software according to modern web application development processes. The expected result is an efficient mobile phone and accessory sales system, contributing to enhancing the competitiveness of Apple One stores in the digital market.

Keywords: Online sales website, ASP.Net MVC5, Apple One Store, Product management, Web architecture
