

# **Building an English learning application on the Android operating system**

**Luong Thi Yen**

**Abstract:** In the context of increasingly widespread access to international languages, this topic focuses on building an effective English learning application on the Android platform. The goal of the research is to create a self-study support tool specifically for users who need to improve their foreign language proficiency through exercises and illustrative videos. The method combines language theory with application development experimentation to ensure interactivity and suitability for children. The expected result is a flexible application that provides diverse learning content, helping users access English more easily.

**Keywords:** Android app, learn English, online education, mobile app development
