

Build a sales website for Green Mobile phone store.

Tran Van Nam

Abstract: This topic aims to research and deploy an online sales website system for the Green Mobile phone store, meeting the business's online sales needs. Through market analysis, identifying technical requirements, proposing user interface (UI) design methods, and modern web development technologies. Through implementation experiments, the system is verified for its effectiveness and convenience for customers as well as the business's product management. The expected results contribute to enhancing Green Mobile's competitiveness in the mobile phone market.

Keywords: E-commerce website, modern web technology, UI design, product management, online business
