

Building the SLauncher application on the Android platform for the SVMC center.

Luu Hoang Viet

Abstract: In the context of high demand for management and customer service at the SVMC Center, this project focuses on developing the SLauncher application on the Android platform. The goal is to improve operational efficiency and user experience for employees and customers through a multi-functional solution. The research method combines theory with experimentation to develop a user-friendly interface along with effective management features. The expected results will contribute significantly to enhancing service quality at the center.
