

Building a library management program for Yen Dung 1 High School - Bac Giang

Mr. Van Thanh

Abstract: In the current context, improving the efficiency of information management in schools is an urgent requirement. This project aims to develop a library management system suitable for the reality of Yen Dung 1 High School - Bac Giang. Through theoretical and experimental research, the project applies modern technologies to optimize the management of books, documents, and learning services. The expected result is an effective library management system, contributing to improving the quality of education at the school.
