

Creating a 2D video "Introduction to Euglena"

Ha Thi Hong Phuong

Abstract: In the context of increasingly developed education and science communication, creating a 2D video introducing the flagellate plays an important role. This topic aims to explain in detail the body structure, ecology, and unique characteristics of the flagellate, in order to enhance public understanding. The research method combines theory with experimentation to ensure information accuracy. The expected result is a high-quality, accessible video that provides valuable scientific knowledge.

Keywords: 2D video, flagellum, science education
