

Research on the bidding process for medical equipment

Do Thi Minh Thuong

Abstract: This topic aims to analyze and evaluate the current state of the medical equipment bidding process at healthcare facilities in the region. Thereby, it identifies existing issues and proposes optimization solutions to enhance management efficiency as well as the quality of medical services. The research method is based on a combination of real data analysis and learning from international models. The topic hopes to contribute to improving the bidding process, creating a fairer and more transparent competitive environment in the healthcare sector.

Keywords: Medical bidding, medical equipment, quality management, international model, process optimization
