

Building a food ordering application for the restaurant Bó Ban – Sơn La

Lo Dinh Hiep

Abstract: This topic focuses on designing and developing a mobile application to support food ordering at the Bó Ban restaurant in Sơn La province. The context for proposing this topic stems from the increasing customer demand for convenience in selecting and ordering food via smartphones. The main objective of this research is to build an efficient order management system that meets customer requirements as well as order management needs for the restaurant. The method combines theoretical and experimental research to ensure the comprehensiveness and feasibility of the product. It is expected that the implementation of this application will contribute to improving service experience and enhancing the restaurant's business efficiency.

Keywords: Mobile application, Bó Ban Restaurant, Food ordering, Order management
